Application

The Watts stainless steel heating circuit manifolds series HKV **Push'n'Go** and HKV-R **Push'n'Go** are used to distribute, shut off and regulate the heating/cooling water flow of surface heating/cooling systems in accordance with DIN EN 1264-4. The **Push'n'Go** connector enables quick and easy connection of the heating circuit manifold to heating and cooling circuits. In addition, with these manifolds the required hydraulic balancing can be carried out very easily via the regulating valves and, with the HKV **Push'n'Go** series, can be checked and read via the flow meters.

Quick pipe installation with Push n Go connector

The **Push'n'Go** connectors are factory-mounted on the manifold outlets, allowing quick and easy pipe installation without special tools in just 3 steps:

1. Push the PE-X pipe into the **Push'n'Go** connector until it meets the stop.
2. Pull the pipe back out so that it hooks in and is fixed in place.
3. Check the correct position of the pipe using the sight glass.

Flow adjustment

Series **HKV PnG**: The flow rate for each heating circuit is set on the return control valve and visually checked on the corresponding flow meter.

Series **HKV-R PnG**: The flow rate for each heating circuit is set on the flow regulating valve using the setting diagram.
