

FW

Antipollution insert checkvalve - EB type
System 01

Technical Data Sheet

Description

Antipollution insert checkvalve FI guarantee the protection of drinking water against a risk of pollution from a fluid of category 2.

- Minimum head loss
- Noiseless due to a split obturator
- Do not generate hammering
- Axial guidance obturator with return spring
- Meet the requirements of european aprovals

FW

Antipollution insert checkvalve - EB type - System 01

DN	PFA in bar	PS in bar				Cat.	Ref.	Weight Kg
		L1	L2	G1	G2			
10	10	10	10	10	10	4.3	2224141	0,002

Important notice :

The temperature and pressure indications given for the various categories of fluids (L1/L2/G1/G2) are under no circumstances a guarantee that they are suitable for your system. Therefore, it is essential to validate the use of the products under given operating conditions with our technical department.

In addition, the operating instructions are available on our website www.socla.com or by simply asking our sales department.

Technical features

Operation temperatures	Continuous -10°C up to 65°C / Maxi. : 85°C (in case of an accidental peak during 1h)
Permissible operating pressure (PFA) in water	See table above
Maximum permissible pressure (PS) other mediums	See table above
Connection	Incorporation in a device
Mediums	Drinking water, clear liquids gaz

Nomenclature and materials

N°	Description	Materials
1	Body	POM (Polyacétal)
2	Guide	POM (polyacétal)
3	Obturator	POM (polyacétal)
4	Seal	NBR
5	Spring	Stainless steel

Approvals

ACS kiwa

Application

FI checkvalves are mainly incorporated in boilers, waters heater and washers.

Fonctionnement

Some vibrations can occur at low flow rates. These vibrations are generated by possible lateral movements of the valve. Until now it was impossible to avoid this effect without affected hydraulic characteristics.

Thanks to the unique guide system by slotted stem that eliminates the possibility of movements and optimal hydraulic profile, vibration are eliminated.

By providing this guidance without the possibility of movements avoids calcareous deposits and vibration, ensuring a flowless and quiet operation for years.
